HCL Domino

Use a secure, enterprise-grade application-development platform for all your collaboration apps — on-premises or on-cloud with HCL Domino

Overview

Domino is business collaboration software developed for hosting critical applications, messaging (enterprise-grade email) and workflow, and providing security features for business-critical information.

Domino can be used as a Web server and/or as an application server for the Notes application, the client side of a client-server collaborative application.

Domino is a stable and secure platform for developing and hosting business-critical collaboration applications, enterprise-grade email and workflow. It has self-healing and auto-repair, which reduces your risk of exposure to outage or failure. You can access your applications from an Apple iPad and fully operate in disconnected mode on iOS. Use your JavaScript developers to enhance, integrate and build new apps - seamlessly integrated with your most-used tools and environments. Call any REST API from your Domino application to quickly bring in Google Maps, a Watson API or even customer data from Salesforce.

KPI

Integrated high - performance work environment

Browser based experience and contact management

Full collaboration environment and user interface

Domino provides compatibility that makes it easy to upgrade.

Banking: Protect your information - Control access, encrypt data, high availability

IT: Protect investments - Simple upgrade, leverage existing applications, managed desktop

Travel: Collaboration beyond email - Calendar, instant messaging, shared documents, editors, applications

Benefits

What Domino can do for your business.

Access your applications from Digital devices to even operate in disconnected mode on iOS.

Four key high level benefits that the customers will get

Enhanced performance monitoring

Domino now features support for CentOS, self-healing and auto-repair. There are increased size limits for dbs, folders, fields, tables and summary data.

Lower total cost of ownership (TCO)

Reduce administration time with increased database limits, auto healing and sample Docker scripts that aid in deployment and management in both on-premises and hybrid environments.

Secure cloud-managed service hosting

Deploy your applications on-premises or in a hybrid environment. Customers have seen a 20-60% lower TCO after moving their applications to Cloud with the Domino Applications on Cloud add-on.

Integration with JavaScript and Node.js

As an add-on to Domino V10, both JavaScript and Domino developers will be able to enhance, integrate and easily build new applications using Domino data.

Mobile access for your Domino apps

Easily provide users with Apple iPad access to your Domino applications with the Domino Mobile Apps add-on. It works online or offline without modification.

Comprehensive security

Domino is so secure that leading accounting firms trust it for their audit processes. Security updates include GSKit, JVM enhancements and greater ease configuring SAML federated identity providers.

About HCL Software

HCL Software is a division of HCL Technologies (HCL) that operates its primary software business. It develops, markets, sells, and supports over 20 product families in the areas of DevSecOps, Automation, Digital Solutions, Data Management, Marketing and Commerce, and Mainframes.
