Sandboxing Technologies

Innovative Advanced Threats and zero-day malware defense

URLSAND protection

URLSand Protection actively blocks in real-time malicious email URLs protecting against phishing attacks, zero-day exploits and ransomware.

CLOUD SANDBOXING

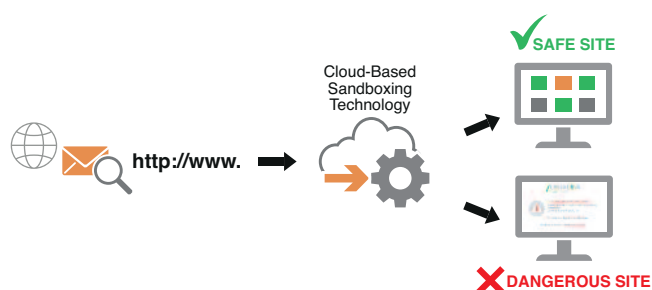

Next Generation Cloud-Based Sandboxing Technology

WHOLE PROTECTION

Protection across the corporate network, public network, and mobile devices.

ADVANCED MALWARE DETECTION

Libra Esva uses sophisticated techniques that are traditionally missed by signature-based and reputation-based solutions.

QUICKSAND protection

QuickSand Protection adopts sophisticated techniques to sanitize documents with embedded active content like macros and scripts, delivering only secure attachments.

GATEWAY SANDBOXING

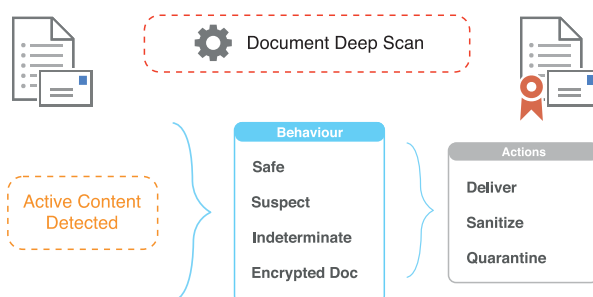

Keep your data secure and private! Threat Analysis runs entirely at the gateway!

DOCUMENT SANITIZATION

Deliver only safe documents, removing active contents from MS Office and PDF files.

EVASION TECHNIQUES RESILIENT

Our technology is virtually immune to attackers' evasion techniques.

About **Libraesva**

Libraesva is the Italian leading provider of advanced email security solutions founded as a spin-off from the structure of software development of Libra. Libraesva stands today as one of the most important brands in the world of security, with a huge installed base. The email content gateway solution ESVA - Email Security Virtual Appliance, developed since 2005, has been recognized by the prestigious Virus Bulletin as one of the best and effective systems of protection and analysis of email content. In 2014, 2015 and 2016 ESVA won the Computing Security Award as 'Antispam of the Year' solution.
